

Chapter 8 Traffic Barrier Safety Beacon Light LED

The STACKA Lamp from Scaffolding Direct is a LED flashing or continuous lamp that runs on AA Batteries. The Lamp is designed to add visibility to pedestrian barriers. The lamps feature a clamp system that is designed to be used with almost any pedestrian barrier. The STACKA is built to be attached to the barrier and then left in place from job-to-job. Most other Barrier lamps have to be removed when being stacked taking up time and also resulting in more breakages and units being lost.

The biggest benefit of using the STACKA lamp is that it utilises LED Technology to extend battery life, therefore bringing down expense. Powered by just two AA batteries which are one of the cheapest available batteries on the market, the lamp has a battery life of either 1500 hours flashing or 750 hours static.

- 360 Degree lens for all-round visibility
- LED technology for superior reliability and battery life
- Built to last - Totally weatherproof design
- Battery life: Typically 2 months flashing / 1 months static from 2 x AA batteries (not included)
- Designed and developed in the UK
